

Figure 4: Surface heavy mineral sampling from Mawson's 100% owned Rompas high-grade gold project. Five non-selective 5 litre heavy mineral samples were collected, with one from South Rompas returning one of the largest accumulations of gold nuggets ever identified within a heavy mineral sample from the Fennoscandian Shield. Other samples included one sample up-ice direction with 18 nuggets, 100 m north-west of the last outcrop in North Rompas
